

Breakout Session: IT Security Framework

Date: October 22, 2009

Goal: How can we effectively and efficiently mature IT Security? Over the past several years, IT Security at Ohio State has evolved as a patchwork of policies, standards, technologies and projects largely driven by responses to events. Improving the OSU security posture requires using a best practice framework to manage the gaps and overlaps, and guide risk mitigation activities. This session provides the opportunity to discuss the potential effects on individual units and to solicit valuable feedback and input. Session participants will gain increased understanding of the OSU IT Security Framework and its application to departments.

Key Points/Questions:

1. Communication Strategy/Plan for the Framework work
2. Balancing risk with institutional goals
3. Library of practice and prescriptive guidance
4. Tools to support compliance
